

Product Requirements Document: Emily Kathryn Photography Digital Ecosystem Redesign

1. Project Overview

The objective is to redesign emilykathryn.com into a conversion-optimized, high-performance digital platform hosted on Vercel. The primary goals are to achieve #1 rankings in Google Business Profile (GBP) Local Pack, Apple Maps, and AI-driven Answer Engines (AEO) for portrait photography across the South-Central Virginia corridor.¹

2. Target Audience Analysis

The redesign targets a dual-audience model where the high school senior drives the aesthetic preference and the parent drives the purchasing decision.⁴

2.1 Primary User: The Class of 2026 Senior (Gen Z)

- **Psychographic Profile:** Values authenticity and social validation. Driven by "editorial" and "Vogue-style" aesthetics.⁴
- **Technical Needs:** Fast-loading, mobile-first visual galleries that are "thumb-friendly" for social sharing.¹

2.2 Secondary User: The Legacy-Minded Parent (Gen X / Early Millennial)

- **Psychographic Profile:** Views senior portraits as the "grand finale" of childhood. Motivated by sentiment and heirloom-quality products.⁹
- **Key Concerns:** Reliability, stress-free booking, and clear value for investment.¹⁰

3. Conversion-Focused Architecture

3.1 Primary CTA Strategy

- **The Global CTA:** "Inquire for Detailed Pricing" must be persistent in the navigation bar and as a high-contrast button on every page.
- **Pricing Anchoring:** To reduce friction and qualify leads, implement "Starting At" pricing on service pages followed immediately by the inquiry CTA.
- **Inquiry Form Optimization:**
 - **Fields:** Name, Email, Graduation Year, High School, and "Tell us about your senior's

style."

- **Mobile UX:** CTA buttons must be at least 44x44 pixels for easy tapping.

3.2 Lead Magnet / Trust Boosters

- **Experience Panels:** Replace text-heavy descriptions with "Experience Storyboards" showing the journey from hair/makeup to final album delivery.
- **Scarcity Cues:** Real-time visual indicators for "Limited Spring 2026 Slots Remaining" to drive immediate inquiries.

4. Hyper-Local SEO & Landing Page Strategy

To maximize Google Business Profile reach, the site will feature dedicated landing pages for each target locality. Each page must contain unique content (250–500 words) to avoid duplicate content penalties.

Target Area	Keyword Focus	Local Relevance Markers
Danville	Senior Portraits Danville VA	The River District, Crossing at the Dan, GW High School
Chatham	Chatham VA Senior Photographer	Historic Downtown Chatham, Chatham High, Hargrave/Chatham Hall
S. Mountain Lake	Smith Mountain Lake Portraits	Moneta State Park, Westlake, Hales Ford Bridge, Docks
Lynchburg	Lynchburg VA Family Photos	Downtown Lynchburg, E.C. Glass HS, Heritage HS, Liberty University
Forest	Senior Photographer Forest VA	Jefferson Forest High, New London area, rural/mountain backdrops
Altavista	Altavista VA Senior Portraits	Altavista High, local parks, industrial/brick aesthetics
Evington	Evington VA Family	Rural landscapes, farm

	Photographer	sessions, Campbell County schools
--	--------------	-----------------------------------

4.1 Landing Page Optimization Requirements

- **Embedded Maps:** Each city page must have a Google Maps embed centered on that specific locality to reinforce relevance to the GBP.
- **Local NAP+W Consistency:** Ensure Name, Address, and Phone match the GBP for that specific area exactly.
- **Local Testimonials:** Feature reviews specifically from clients in that town (e.g., "Aria from Jefferson Forest HS").

5. Functional Requirements

5.1 Vercel/Next.js Technical Stack

- **Next.js Image Pipeline:** Implement next/image with WebP/AVIF and placeholder="blur" for high-res portfolio shots.¹³
- **Performance Targets:** LCP < 2.5s and CLS < 0.1 to meet 2026 Core Web Vital standards.¹⁴

5.2 Visual Content Management System (CMS)

- **Recommended Platform:** Sanity CMS or Prismic (Free Tier).
- **Visual Editor Integration:** Enable "Click-to-edit" functionality so the client can swap gallery photos or update local landing page text visually without code.
- **Incremental Static Regeneration (ISR):** Content updates in the CMS must reflect on the live site almost instantly.

6. External Entity & Maps Optimization

6.1 Google Business Profile (GBP) & AEO

- **Relevance Signals:** Link target landing pages directly from GBP "Services" or "Website" fields where city-specific queries are likely.
- **Answer Engine Optimization (AEO):** Each landing page must lead with a 40–60 word "Answer Block" for queries like "Where is the best place for senior pictures in Smith Mountain Lake?"¹⁵

6.2 Apple Business Connect

- **Branded Mail:** SPF/DKIM verification to ensure the EKP logo appears in Apple Mail inboxes.¹⁷
- **Showcases:** Use for location-specific offers (e.g., "Now Booking: SML Summer Sessions")

with direct inquiry action links.

7. Success Metrics

- **Conversion Rate:** 8–15% inquiry rate from landing page visits.
- **Local Visibility:** #1 Rank in Local Pack for all 7 target cities.
- **Core Web Vitals:** 100/100 performance score on mobile via Vercel Speed Insights.¹⁴
